1st Team Meeting with Mr Premrajan

2026-04-18 // 1630hrs

1. General Notes:

- All submissions must include team ID (FYP-26-S2-37)
- Reflective diaries to be submitted individually
- All other submissions by group leader
- Group leader to CC all members in all email communications
- Meetings done as and when needed (Team must request)
    - Schedule 2-3 days in advance
    - Notify is unable to make it

2. Project Plan (General):

- Verify all details in project plan and make sure they are accurate:
    - Name
    - UOW ID
    - Email
- Follow Project Plan for all deadlines

3. Project Plan (Project Desc):

- Decide functionality
- Refine
- Make sure to match these points:

This project aims to develop a mobile application (for Android and iOS) that can collect exercise data from cell phone sensors or wearable devices, provide training and fitness advice, and facilitate social interactions such as initiating competitions between registered users. The application should have the following features.

1. *Collect exercise data:*
The application can collect user exercise information from either the cell phone's own sensors or from smart wearable devices (via Wi-Fi, Bluetooth, etc.).

2. *Estimate exercise effects* (short-term or long-term) and provide analysis:
The application can estimate the exercise results of each activity, a day, a week, a month, or any period, such as the number of calories burned and the average and maximum heart rate.

3. *Supply fitness advice and schedule a fitness plan*:
The application can provide fitness advice according to the user's fitness goals and their entered health information. It can also create a fitness plan based on the fitness goal, and users can customize the plan to their preferences, such as the length of the plan or the daily weight loss goal.

4. *Remind user of exercise or take a break*:
The application can send reminders to users to exercise if they have not met their scheduled exercise goals. It can also send reminders to users to take a break if they have been exercising too much.
Team to develop a product based on a suitable business model with responsive and user-friendly interface that works seamlessly on various mobile devices. Optimize the user experience for different

5.Connect with social media and initiate competitions between users:
The application can be used to share exercise completion data on social media platforms such as Facebook, Instagram, Twitter. TikTok. Users can also initiate competitions with other registered users and invite them to join in. The competition results and rankings can be shared on social media.

Team to develop a *SaaS* product based on suitable business model with above functionalities and offer a user-friendly solution that provides profile-based services to the users. The product must empower users to make data-driven decisions based on their profile and the activities they carry out.

The application must have features to profile the users, Intelligent content delivery with context aware recommendations, Incentive based motivation mechanism with gamification to facilitate social interaction, Analytics- including Progress tracking, predictive analytics etc.

The application must have product marketing website to market and attract the users to sign on and then download the mobile application.

The team may consider releasing the application *to the app store*.

- Keep in mind:
    - Either APK or release to app store
    - Do marketing on our website:
        - Display features, etc

4. Project Plan (Diary):

- Just send weekly
- Should receive reply within 2-3 days, if not, email again to confirm

5. Project Plan (Individual Research):

- Make the app generic in nature, no need to specifically work on one form of exercise
- Missing:
    - Food tracking (calorie counting etc)

6. Project Plan (PRD – Project Requirement Documentation):

- Due 2nd May (1 week before actual moodle submission on 9th May)
- Refer to sample for structure and flow:

7. Project Plan (SRS- System Requirement):

- Due 14th May (no need to submit to moodle)
- Submit to supervisor

8. Project Plan (TDM- Technical Design Manual):

- Due 21st May (no need to submit to moodle)
- Contains:
    - Entity diagram

    - Dataflow diagram
    - Sequence diagram
    - Wireframe (best to use figma)
    - Etc…

9. Project Plan (Prototype):

- Due 21st May (no need to submit to moodle)
- Scaled down version of app
    - Focus on a few key user functions

10. Final Submission for 1st Half of FYP:

- Due 10th Jun (3 days before actual submission in moodle)
- Deliverables:
    - Application prototype with basic functionalities
    - Project Progress Report consisting of Preliminary Project Documents:
        - Preliminary Technical Documents – consisting of:
            - PRD
            - SRS
            - TDM
        - Preliminary User Manual (User manual for prototype)
        - Peer Assessment form

11. Final Assessment:

- Demo to supervisor one week before (actual assessment in person on 20th Jun)
- Deliverables:
    - Application prototype with basic functionalities
    - Project Progress Report consisting of Preliminary Project Documents:
        - Preliminary Technical Documents – consisting of:
            - PRD
            - SRS
            - TDM
        - Preliminary User Manual (User manual for prototype)

12. Next Steps:

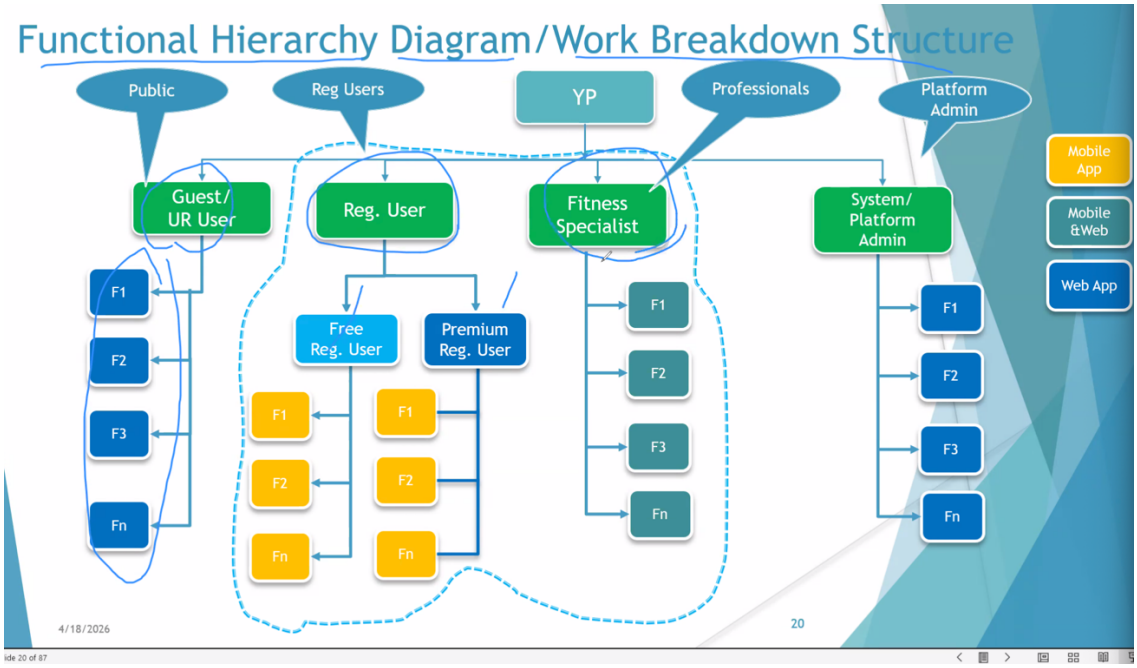
- Look into:
    - What are the different tools required?
    - What business models are there / which is better for this project?
    - What functionalities do the users want?
    - What are the key functions that are important for the app?
- Examples:

    - Before eating, use app to key in information (collect data on food consumed)
        - What are the things that should be recorded?
        - What are the methods of collection?
        - How can we automate the collection for ease of use for the user?

- What are the types of data to be collected?
    - Static data:
        - Gender
        - Age
        - Height
        - Weight
    - Dynamic data:
        - What u eat
        - What u do
        - Goals

12. By Next Friday (24th Apr):

- Work on:
    - Functional Hierarchy Diagram
    - Work Breakdown Structure
- Create Taiga / Jira
    - Create:
        - Task
        - Timeline
        - Track when done, etc
- Start work on PRD



WBS Work Breakdown Structure (Example)
